SEPTEMBER 18, 2017

Dear Vendors,

Trigon Plastics needs your help. Due to the National Sword, there is a very tight market for 3-7's. I am getting push back from my vendor on how much black plastics is contaminating my bales. We are trying to pull it out here, but we are having a tough time due to the speed of our machine. The problem with black is due to our belts being black our optical sorters don't see the black plastic so all of it goes into our 3-7's which is contamination it with 1's and 2's which my vendor doesn't want.

What we are asking is if you can stop putting black plastic into your bales. I do understand that you do have bales which are already made that may have black plastic in them. We are going to start evaluating every load for black plastic. I will not down grade the next load that we get from your location. If it has too much Black plastic in it I will contact you and see if we can work together to get it removed if we can't I will have to stop bring it in. Thanks for helping me out with this. Below are our requirements.

The following is our requirements:

1. Plastics be bales
2. No rigid plastics in the bales
3. Avoid plastics bags as much as possible
4. No banding straps
5. Avoid oil and pesticides bottles as much as possible.
6. No Black plastic

Warm regards,

Nick Jovich

MATERIAL MANAGER
