THE STATE OF THE S

SELECTMEN'S OFFICE TOWN OF GILMANTON

503 Province Rd, Gilmanton, NH 03237

Ph: (603) 267-6700 Fax: (603) 267-6701 Website: <u>www.gilmantonnh.org</u>

Board of Selectmen Meeting
Wednesday, April 26, 2023 – Academy Building, 503 Province Rd- 2:00 p.m. Meeting will not surpass 5:00 p.m.
AGENDA
CALL TO ORDER – ROLL CALL
PLEDGE OF ALLEGIANCE

We understand there is much public interest in the situation with the Transfer Station. At this time the Board of Selectmen is asking for the public to have additional patience while we work on the current conditions at the facility.

This meeting is for Board discussion only. The Board will be holding a special meeting with the public to discuss the Transfer Station situation shortly, with dates to be determined.

Thank you for your understanding.

Board of Selectmen

NON-PUBLIC 91-A:3 (_) - If necessary

JOINT LOSS GENERAL BUILDING CHECKLIST

NAME OF WHO IS COMPLETING CHECKLIST: Robin Bonan, Healther Carpenter, Matthew Currier, Joe Hempel, Ron Nason, Maura Thomas

BOILER / ELECTRICAL / MECHANICAL ROOMS:	YES	NO		COMMENTS
1. Are the doors shut and locked when not in use?	4		Х	
2. Are all chemical containers clearly labeled with the name of the chemical and any warnings?	X			
3. Is the room clean and orderly and not used for storage of non-essential materials and items?		Х		
4. Are the floors free of standing water or liquids?		Х		
5. Are electrical panels and breaker boxes clear of obstructions?	Х			
6. Are electrical boxes, switches and receptacles covered?	Х			
7. Are 3' clearances maintained front and side of all electrical transformers and electrical panels?		Х		
OFFICES:	YES	NO	N/A	COMMENTS
1. Are all exit doors unobstructed for quick and easy evacuation in emergency situations?	×			
2. Do floors have cords, books, debris or other trip hazards?	х			
3. Are chairs, seats, desks and lockers hazard free?		х		
4. Are windows free of breaks and cracks?	V		Х	
5. Are closets and storage rooms clean and orderly?		Х		
6. Are rooms neat and clean? (Trash removed, no evidence of structural rot / pests, etc.)		Х		
7. Is all fabric and stuffed furniture fire rated?		Х	7	
1. Are electrical cords covered or secured to prevent a tripping hazard?		х		
2. Are file cabinets, shelves, partitions properly secured and free of loose items lying on top of them?		х		
ENTRANCES/EXITS:	YES		N/A	COMMENTS
1. Is the entrance well lit?		Х		
2. Are floor mats provided on the inside of all entrances?		Х		
3. Are floor mats maintained in such a manner as to prevent tripping?		Х		
4. Are steps in good condition with no broken or loose steps?			X	
5. Is a handrail installed and is it firmly attached?		Х		
6. Is there a sign directing all visitors to sign in at the office when entering the facility / building / school?		Х		
7. Are exits properly marked?	х			
8. Do all exit doors open outwards with the path of egress?	X			
9. Are exit doors chained or padlocked when employees and/or children located in the building? (Chaining or padlocking an			X	
emergency exit door with employees or children in a facility or school is a fire code violation.)			^	
10. Do all exit doors open freely and provide an unobstructed path to an outside public area?		Х		
11. Are exit paths marked and maintained free of debris and other items that can block or partially block the exit? There must be		Х		
a minimum width of 22 inches for all exit paths and doors.		^		
12. Are glass side panels marked to distinguish them from glass doors?	(Х		
HALLWAYS:	YES	NO	N/A	COMMENTS
		Х		
1. Are all hallways and entrances to rooms well lit?		х		
Are all hallways and entrances to rooms well lit? Are all areas clean and free of loose materials and debris that could create a tripping hazard?			-

November 12 2021

Re: Gilmanton Transfer station

On Wed Nov. 10 2021 at the direction of the Town Administrator, I conducted an inspection of the Gilmanton transfer facility. Ron, the Department head allowed me access as needed.

My immediate impression was the entire facility was in dire need of housekeeping. Various Egress and access points to the facility are in disarray and partially blocked with varying debris / items. Also, access to critical functions of the facilities electrical panel, disconnects, fire extinguishers bathroom etc. are either fully or partially blocked and not easily accessible.

The facility is not equipped with any kind of early warning smoke / fire / heat detection / suppression systems. Not only could this be critical to life safety, but would also provide early warning to Fire Department after hours.

The main building has a large section of sheetrock missing (above the bailer) due to an apparent incident with equipment / cardboard puncturing the ceiling. The fire barrier between the open space of the building and wooden roof trusses above has been greatly compromised. Additionally, it appears the structure of the MFG. roof trusses may have been repaired without MFG. engineering to check the adequacy of the repair to handle snow, wind loads.

Electric circuits are overloaded throughout. Many circuits have outlet strips in use, feeding multiple electrical fixtures, extension cords, including several electric heaters. Electric heaters appear to be the main, or only heating source for the facility. The main panel for the building has open slots which exposes an electrified bus bar, a personnel safety hazard. The panel was also behind an awkward fence gate that was also obstructed by debris. The panel labeling is either incomplete or inaccurate. There are areas of electrical wiring that appear to have not been professionally installed.

Areas of insulation are either missing or falling. There are flammable items around and inside the building. The flammable cabinet is full and blocked by debris. There may also be some sanitary issues within the bathroom and kitchenette that may be addressed by the Health Department.

The staircase to the control room (compactor) is rickety and out of code, I would consider this staircase to be a safety hazard. Also, the control room is heated by an electric heater, has no fire detection in place.

Overall, the building, as currently being used, is not in good operating condition and could ultimately pose a life safety risk. I'd recommend the building be more closely evaluated by a licensed professional, who is regularly engaged in the proper design, function and use of this type of facility. Perhaps then a clear plan can be implemented to bring the building into compliance for code and life safety.

Photos attached.
If you should have any questions, please do not hesitate to contact me.
Sincerely,
Fab Cusson
Building Inspector / Code Enforcement

Re: Gilmanton Transfer Station

On Monday December 7th I did an inspection at the Gilmanton Transfer Facility. A follow up to the previous inspection on November 12, 2021.

Ron, the Department head and I went over the list from the previous inspection and walked the station.

The following items are still outstanding,

I found the facility relatively clean with some various debris about but none of it blocking any exits.

- 1. The entrance gate to the facilities service panel was partially blocked and in the service panel, there were open breaker slots that need to be filled as they're open to the busbar, this is a violation and needs to be addressed immediately and panel breakers are not thoroughly marked. Ron said he had reached out to the Town electrician and as of yet has not gotten back to him, also reminded him that the gate entrance cannot be blocked at any time.
- 2. The main building is still missing a large area of sheetrock above the bailer as in the previous report this is a fire barrier and now the roof structure is compromised to a fire. I agree with the previous report that the MFG. roof trusses may have been repaired with out engineering guidance to handle wind and snow load.
- 3. Areas of insulation are still missing in the main building, but with no heating system and overhead doors open at time for bailer operation and fork lift going in and out the lack of insulation is really a moot point. Still should be addressed.
- 4. There still could be some sanitary issues in bathroom/kitchen area that should be looked at by Health Officer.
- 5. The staircase to control room is complete and satisfactory but is missing a gripable hand rail on each side of stairs per code. Ron will put these on for he was not told they were needed.

I found the facility relatively clean with some various debris about but none of it blocking any of the exits.

I concur with the previous Inspection report stating it is not in good operating condition and could pose a life safety risk and should be evaluated by a licensed professional to do an evaluation of the facility.

Sincerely.

Scott LaCroix

Assessment inspection of Gilmanton Transfer Station Performed by Chief J. Hempel 11/03/21

On Wednesday Nov 03 2021 at the request of the Gilmanton BOS I performed an inspection of the Gilmanton Transfer Station. The inspection was a walkthrough of the facility, with the intent of providing the BOS an overall assessment of condition of the site pertaining to health, safety, and working conditions. I met up with the Transfer station manager Ron Nason when I first arrived. He directed me to the inside of the work shop and he was available to answer some questions that I had. I proceeded to perform my inspection on my own. I documented my visit with photos. These photos are attached to this report. See a record of my observations below.

The service side of the transfer station building where the public accesses service, including the recycling windows, free room, compacter area was in fair condition. Staff makes an effort to make sure the area is accessible and free of clutter. It appears that the area still could use some attention to organize refuse and maintain safe areas of travel in the facility.

The Metal area had been recently reorganized. Waste has been removed and area is in adequate shape.

The compost /leave waste area is a large area that according to the transfer station manager is difficult manager. There is no means to dispose of this pile. We have had this pile ignite in the past and it continues to pose a fire hazard.

The brush pile is managed by burning weekly. If burning is to be continued a new and improved, safer area should be established. The current area does not offer sufficient safety and perimeter to assist in the containment of burning material.

The inspection of the rt 140 side exterior and the loading dock area of the transfer building showed a need of organization. Wind blown waste was all over. Loading dock area was in need of organization. May fall and trip hazards were noted. The garage doors to the building were blocked by storage. Storage of material was poorly organized and posed safety hazards.

An interior inspection of the transfer station building was followed by the exterior inspection. The general impression was that interior of the building was in severe disarray and in need of immediate organizing and cleaning along with removal of unnecessary material, including furniture, hazardous liquids, trash, and debris.

Storage areas and shelves were filled with many collected items that need to be removed from the building. Several immediate needs.

The storage of hazardous materials including paints, fuels, oil needs to be addressed. These were not stored properly and may pose a hazard.

Work areas and walkways to storage cabinets were cluttered and unorganized. Fall and trip areas were most everywhere in the facility.

The ceiling above the cardboard baler was breeched from what appears to be bobcat bucket strikes. This creates a hazard area that could enhance the spreading of fire.

The bailing machine had debris all over the unit. This creates fuel to burn in the event there is a mechanical issue of fire with the unit. The debris surrounding the machine will provide fuel for a fire. The unit should be free of debris all the way around.

There are light fixtures in the building that require repaired or replacement.

The office area is in need of organization and cleaning. There appears to be an overabundance of materials stored in this office area.

Please see pictures added to this recap. They clearly show the areas of this facility that need immediate attention. There is a great need to get this facility cleaned organized and tidy. The storing of unnecessary items is creating hazards in this work place. The risk of an injury to an employee or a resident, as well as the threat of a fire or hazardous material incident is higher at this time with the building in this condition.

Please feel free to contact me with any additional question.

Yours in public safety

Chief/Hempel_
